

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR UPDATING STORE INFORMATION IN A SUPPLY CHAIN MANAGEMENT FRAMEWORK

5

ABSTRACT

10 A system, method and computer program product are disclosed for updating information
 in a supply chain management framework. A plurality of stores of a supply chain are
 registered utilizing a network. The registration includes receiving first identification
 information. Data is collected from a plurality of stores of the supply chain utilizing the
 network. This data relates to the sale of goods by the stores and includes second
 15 identification information more recent than the first identification information. Access to
 the data is allowed utilizing a network-based interface so that the first identification
 information can be compared with the second identification information in order to allow
 for the updating of the registration of the stores based on the comparison.
